

Configured Salesforce Org

Prepared by: Shaden Bawazir

Date: August 2026

Project: AI-Powered Appointment Management Assistant

1. Data Model

1.1 Object Overview

Object Name: Appointment__c

Description: A custom object designed to manage all appointment-related data. This object serves as the central data repository for the entire application, storing customer details, appointment schedules, and status tracking.

Purpose:

- Stores core appointment information (Customer Name, Email, Date, Time).
- Tracks the lifecycle of an appointment using a status field.
- Supports reporting and analytics through structured picklist values.

1.2 Fields & Relationships

Field	Data Type	Purpose	Validation Rule
Customer Name	Text (100)	Stores the customer's full name	Required
Customer Email	Email	Stores the customer's email address	Must be valid email format
Appointment Date	Date	Stores the date of the appointment	Required
Appointment Time	Text	Stores the time of the appointment	Required
Service Type	Picklist	Defines the type of service (Consultation, Follow-up, Support, Meeting, Other)	Required
Status	Picklist	Tracks lifecycle (Scheduled, Rescheduled, Cancelled, Completed)	Required
Notes	Long Text Area (32768)	Additional notes or instructions	Optional

Relationships:

- The Appointment__c object is **standalone** (no Master-Detail or Lookup relationships) to ensure data privacy and simplify the data model. This design decision keeps the system lightweight and scalable.

2. Security & Access Management

2.1 Organization-Wide Defaults (OWD)

- Appointment__c: Set to **Private** to ensure that records are only accessible to users with explicit sharing rights or superior roles. This protects sensitive customer data and ensures strict compliance with data privacy standards.

2.2 Profiles & Permission Sets

Profile: Appointment Management Profile

- **Object Permissions:** Read, Create, Edit, Delete on Appointment__c.
- **Field-Level Security (FLS):** Full access to all relevant fields (Customer Name, Email, Date, Time, Service Type, Status).

Permission Set: Appointment Access

- **Purpose:** Assigned specifically to the **Agentforce User (EinsteinServiceAgent)** to allow the AI to execute transactions (Create/Update) on the Appointment__c object without violating security policies.

2.3 Role-Based Access Control (RBAC)

The system implements **Role Hierarchy** to ensure that users only access data relevant to their role:

- **System Administrator:** Full access to all records and configurations.
- **Agent User:** Access only to records created or processed through the AI agent.
- **Standard User:** Access to records they own.

2.4 Data Encryption & Authentication

- **Encryption:** Salesforce native **Platform Encryption** is enabled for sensitive fields to protect data at rest.
- **Authentication:** Users authenticate via **Salesforce Single Sign-On (SSO)** (optional) and standard login credentials. The **Einstein Trust Layer** ensures secure AI processing.

3. Agentforce Configuration

3.1 Agent Instructions (System Prompt)

The agent is governed by the following instructions to ensure it stays within its guardrails:

"You are an Appointment Management Assistant. Your primary responsibility is to help customers manage their appointments. You can help customers: Schedule a new appointment, Reschedule an existing appointment, or Cancel an appointment. Always communicate clearly and professionally. Before creating or changing an appointment, confirm the required information with the customer. Required information for a new appointment: Customer Name, Customer Email, Appointment Date, Appointment Time, Service Type. Never invent appointment information. When an appointment is successfully created, changed, or cancelled, clearly confirm the result to the customer. If required information is missing, ask the customer for it."

3.2 Subagents (Topics / Intents)

Subagent	Intent	Action
Appointment Scheduling	Create a new appointment	Invoke Schedule Appointment Flow
Appointment Rescheduling	Modify an existing appointment	Invoke Reschedule Appointment Flow
Appointment Cancellation	Cancel an existing appointment	Invoke Cancel Appointment Flow

3.3 Conversational Flow

1. **User Input:** The customer types a request (e.g., "Book an appointment for Ahmed at 10:00 AM on 2026-08-21 for Consultation. His email is ahmed@email.com").
2. **Agent Classification:** The agent classifies the request to the appropriate **Subagent** (e.g., Appointment Scheduling).
3. **Data Capture:** The agent extracts the relevant **Entities** (Customer Name, Email, Date, Time, Service Type) from the conversation.
4. **Action Execution:** The agent invokes the corresponding **Flow Action**.
5. **Confirmation:** The agent confirms the successful execution to the user (e.g., "Your appointment has been successfully booked").

3.4 Custom Entity Recognition

The agent uses **Prompt Engineering** to recognize and extract the following entities from natural language:

- **Person:** Customer Name (e.g., "Ahmed")
- **Date:** Appointment Date (e.g., "08/21/2026")
- **Time:** Appointment Time (e.g., "10:00 AM")
- **Service:** Service Type (e.g., "Consultation")

4. Lightning Experience Application

4.1 App Overview

App Name: Appointment Management

Description: A dedicated Lightning App for administrators and agents to manage the AI assistant, appointments, and related analytics.

4.2 Navigation & Tabs

Tab	Purpose
Appointments	View and manage all appointment records
Home	Display the default dashboard and recent records
Reports	Access the Appointment Management Overview report
Dashboards	Access the Appointment Management Dashboard

4.3 Record Page Layout

A custom **Lightning Record Page** was created for the Appointment__c object with the following components:

- **Highlights Panel:** Displays the record name and key fields.
- **Record Detail:** Displays all fields (Customer Name, Email, Date, Time, Service Type, Status, Notes) in an organized layout.
- **Activity Timeline:** Tracks all interactions and updates on the record.

5. Reports & Dashboards

5.1 Report

Report Name: Appointment Management Overview

Fields: Customer Name, Appointment Date, Appointment Time, Service Type, Status, Customer Email.

5.2 Dashboard

Dashboard Name: Appointment Management Dashboard

Components:

- **Donut Chart:** Shows appointment count by Status (Scheduled vs. Cancelled).
- **Table:** Shows appointment details for monitoring and decision-making.

6. Best Practices & Adherence

6.1 Data Backup & Recovery

- **Automatic Backups:** Salesforce performs automatic backups of the org data. Administrators can request a backup via the **Data Export Service**.

6.2 Disaster Recovery

- **Salesforce Trust:** The org is hosted on the **Salesforce Trusted Cloud**, which ensures high availability, disaster recovery, and continuous monitoring.

6.3 Compliance & Architecture

- **Salesforce Best Practices:** The solution adheres to **Salesforce Architecture Guidelines**, including:
 - Use of **Custom Objects** for specific data needs.
 - Implementation of **OWD Private** for data security.
 - Use of **Autolaunched Flows** for scalable business logic.

Conclusion

The configured Salesforce org demonstrates a **complete, secure, and scalable** implementation of the AI-Powered Appointment Management Assistant. The solution adheres to Salesforce best practices and provides a robust foundation for managing appointments through conversational AI.
